

Course Introduction

Ambient intelligence

Fulvio Corno

Politecnico di Torino, 2017/2018

Basic information

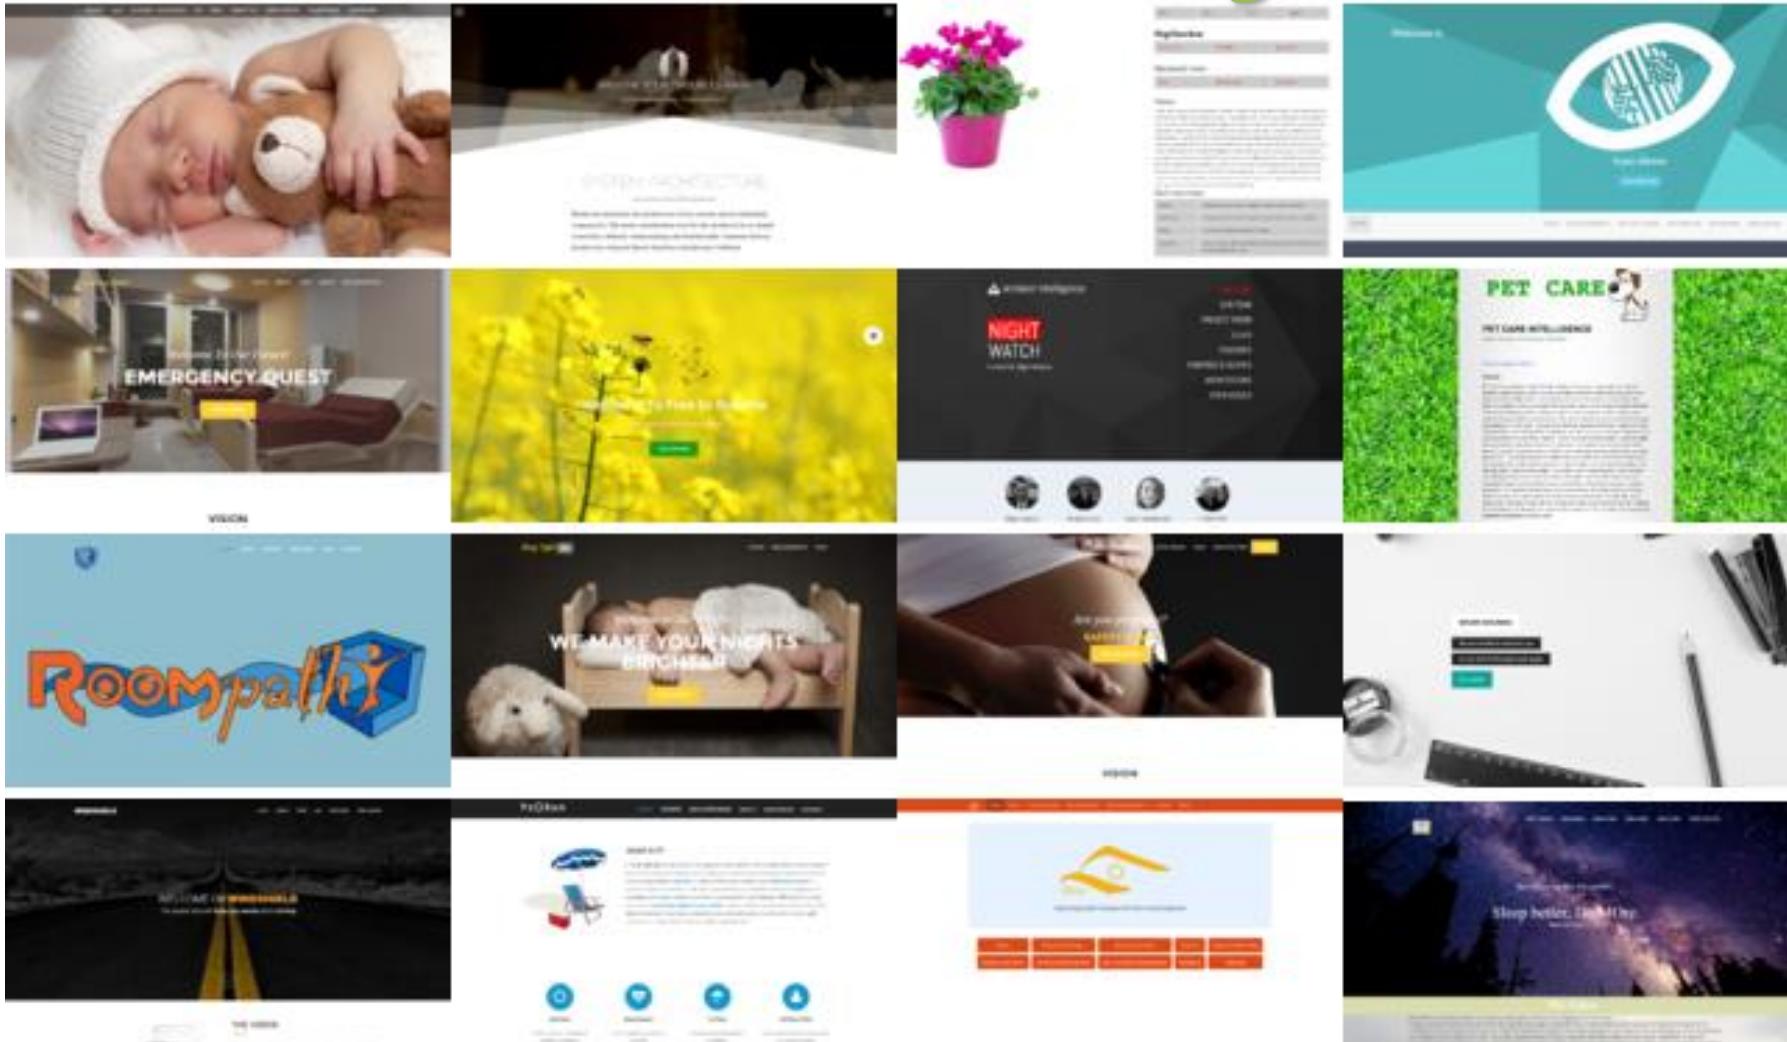

- Title: **Ambient Intelligence**
- Code: 01QZPxx
- Year: 3, Semester: 2
- Credits: 6
- Language: English (almost...)

Summary

- Goals and contents
- Organization
- Resources
- Exam
- Previous projects and Showcase

Course Introduction

GOALS AND CONTENTS

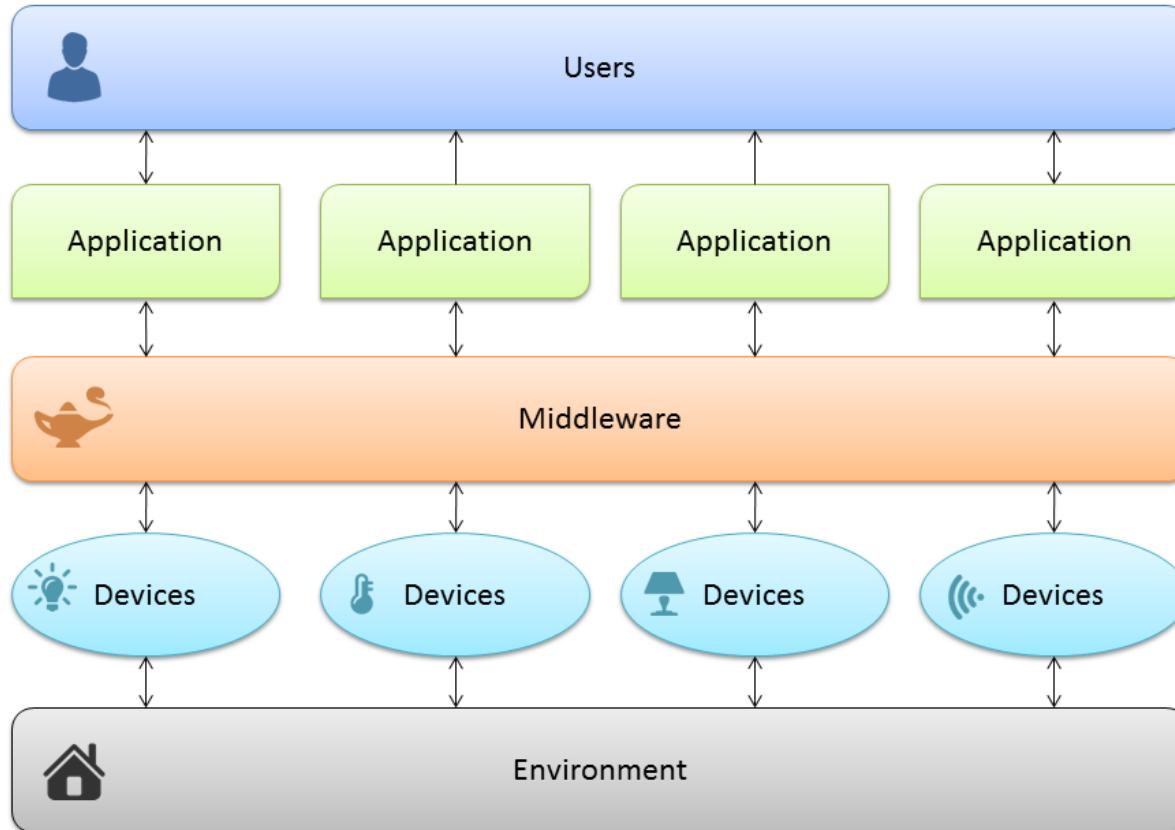

Goals

- Designing and realizing environments that enrich the user experience and help householders in their activity
- Adopting a feature-driven design methodology, targeting open and reusable solutions
- Integrating existing devices and existing home- and building- automation systems (don't reinvent the wheel)
- Really building a (simple) working Aml system, in a multi-disciplinary team

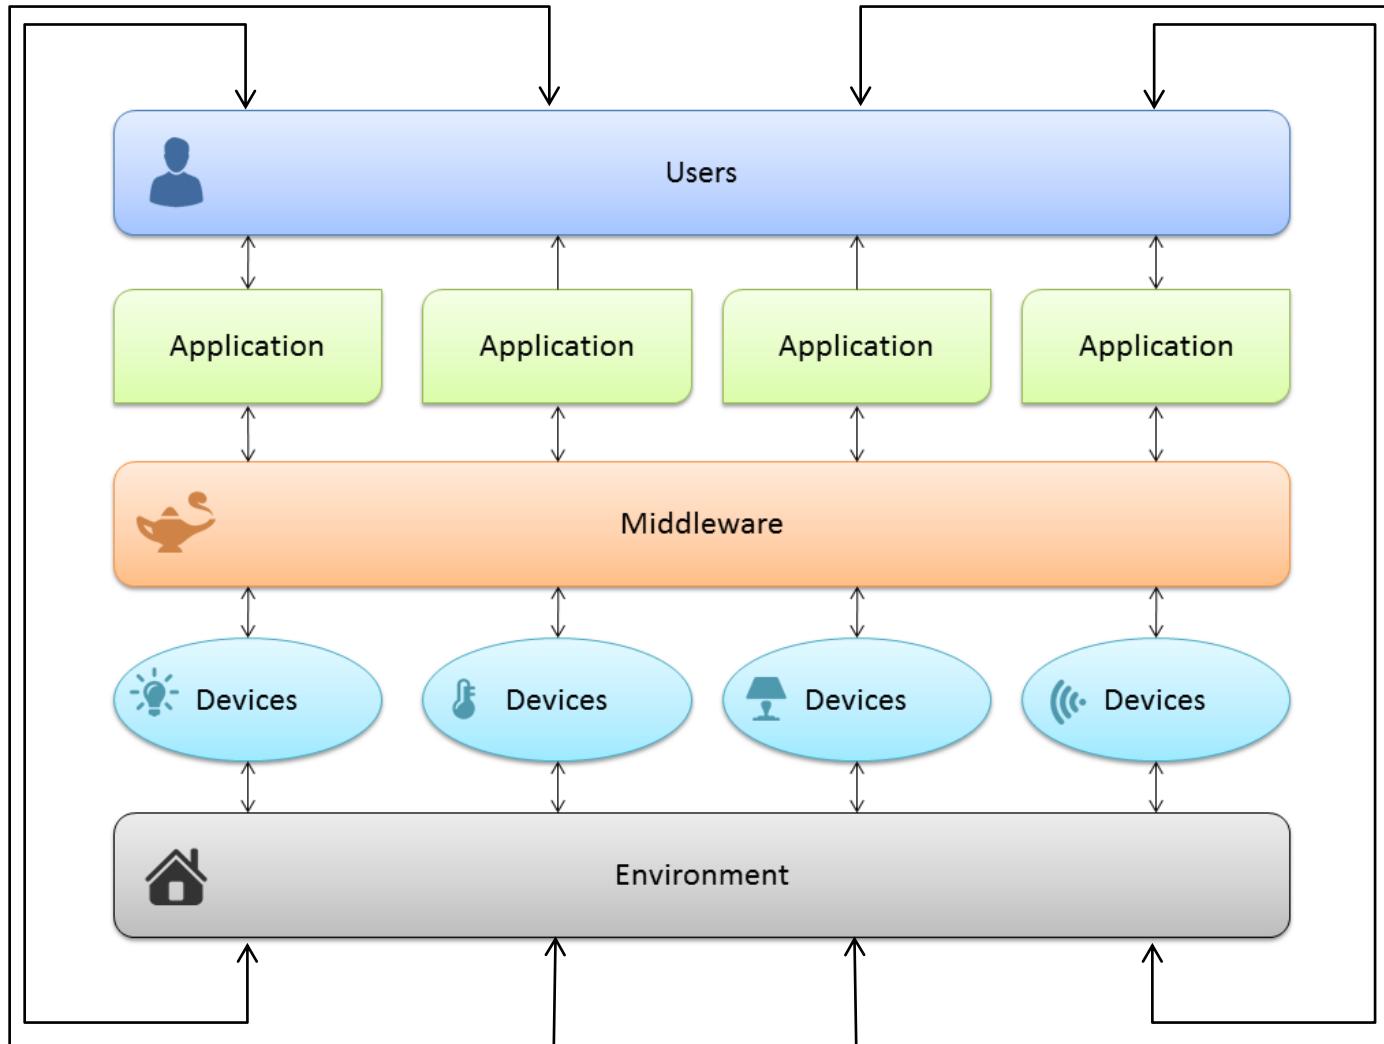

Definitions

- “An **Ambient Intelligence** system is a digital environment that proactively, but sensibly, supports people in their daily lives”
- “An **Intelligent Environment** is one in which the actions of numerous networked controllers (controlling different aspects of an environment) is orchestrated by self-programming pre-emptive processes (e.g., intelligent software agents) in such a way to create an interactive holistic functionality that **enhances occupants experiences.**”

Reference architecture

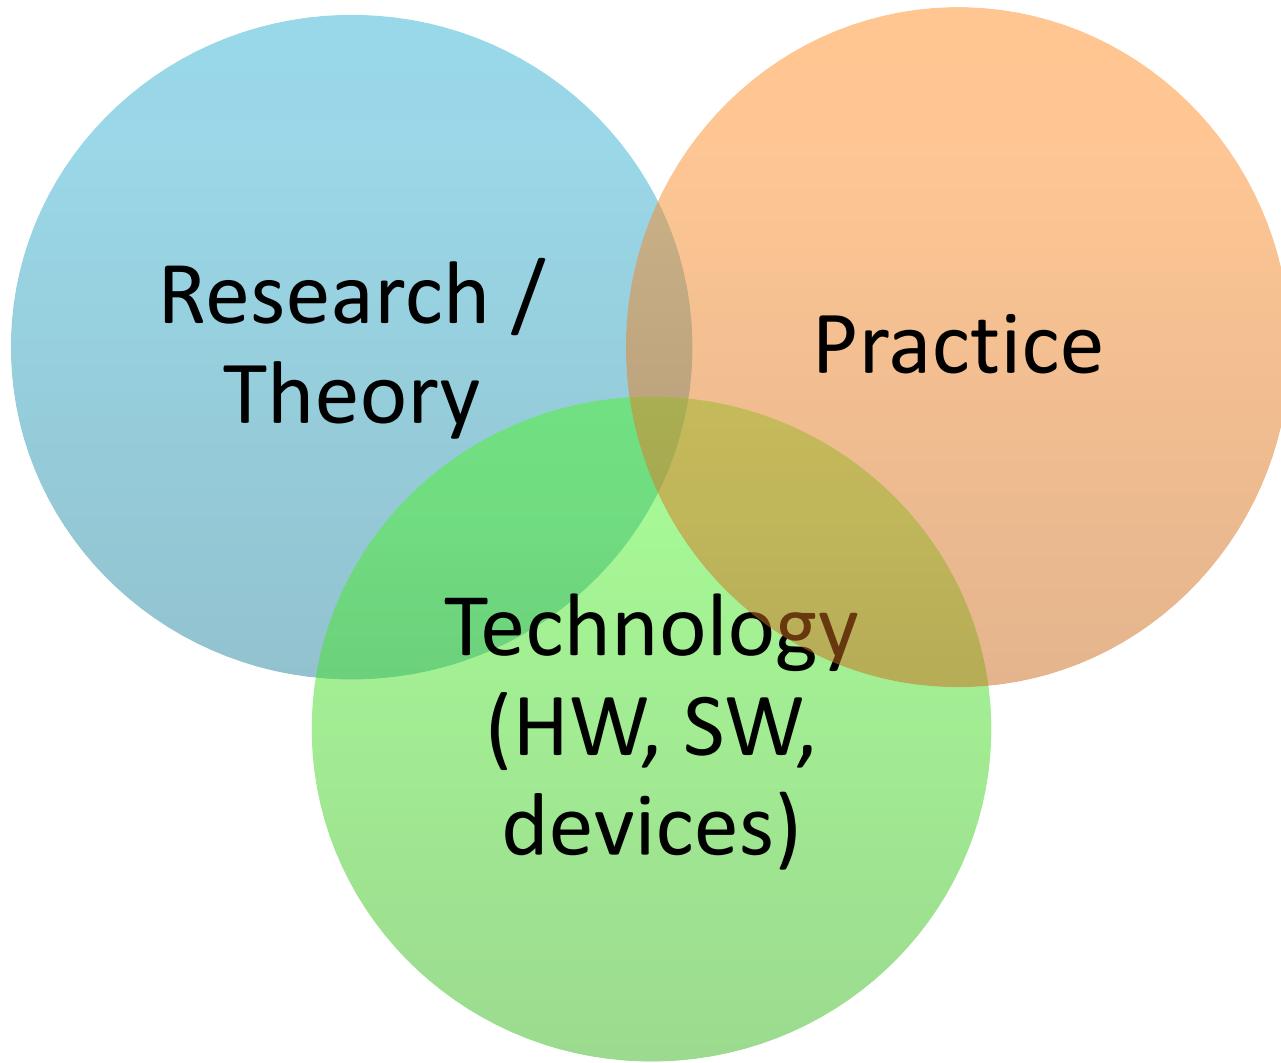

Reference architecture

Main contents

- Aml definitions, applications, systems: taxonomy and market overview
- Feature-driven design methodology
- Enabling technologies: Linux, hardware boards, python, Web, Dog3.0
- Some off-the-shelf automation technologies
- Rapid prototyping and development
- Group work (supervised and free)

Approach

Approach

- Mix of
 - Theory
 - Technology overview
 - Practical information
 - Hands-on experience
 - Group work
 - Industry information
 - Application areas
- Main focus
 - Practical approach
 - Sound design methodology
 - Open and reusable solutions
- *Learning to design and build a (working) Aml solution*

Course Introduction

ORGANIZATION

Teachers

- Fulvio Corno <fulvio.corno@polito.it>
- Luigi De Russis <luigi.derussis@polito.it>
- Alberto Monge Roffarello <alberto.monge@polito.it>
- Politecnico di Torino, Dipartimento di Automatica e Informatica
- ~20 hours each, mixed Lecture / Exercise / Lab

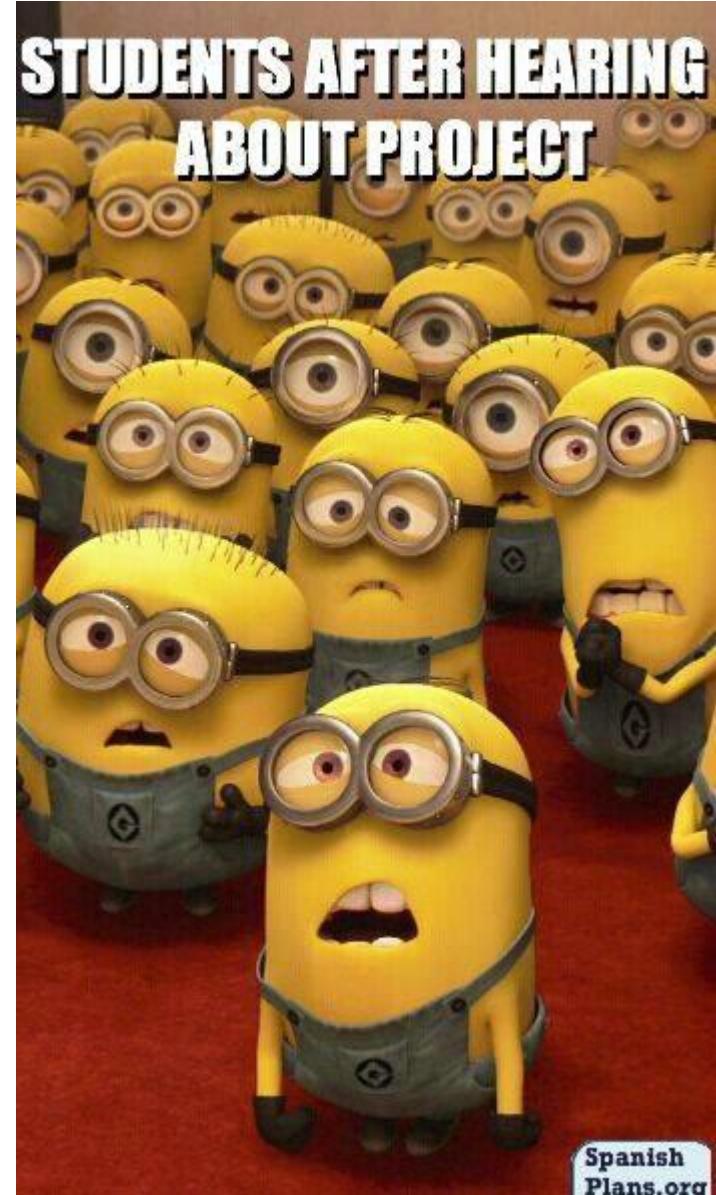

Schedule

- Monday
 - 14:30-16:00
 - LADISPE
 - Room 8I
 - 16:00-17:30
 - LADISPE
 - Room 8I
- Thursday
 - 17:30-19:00
 - Room 8I

Updated week-by-week schedule on
the course website (“Log” section)

The Lab

- LADISPE
- Essential part of the course
(the most important)
- Real smart home hardware
and IoT devices
- 50% assigned exercises
- 50% supervised group work
- Group work

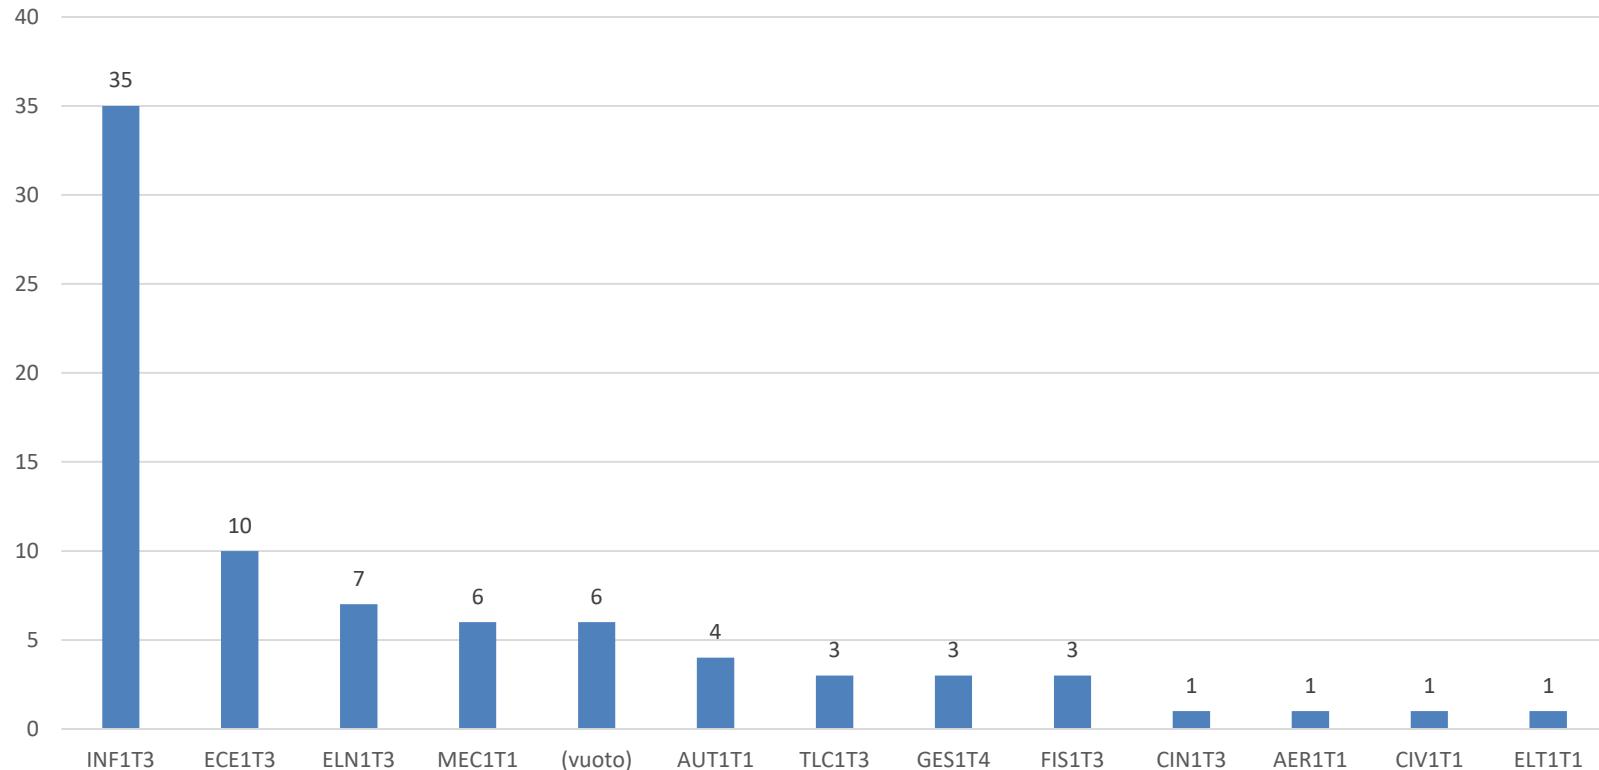

The Skewed Schedule

Week	Classes	Exercises	Group Work
1	1		
2	3		
3	1	1	1
4	2	1	
5	2	1	
6	2	1	
7	1	2	
8	2	1	
9	2		1
10	1	1	1
11	1		2
12		1	2
13		1	2
14		1	2

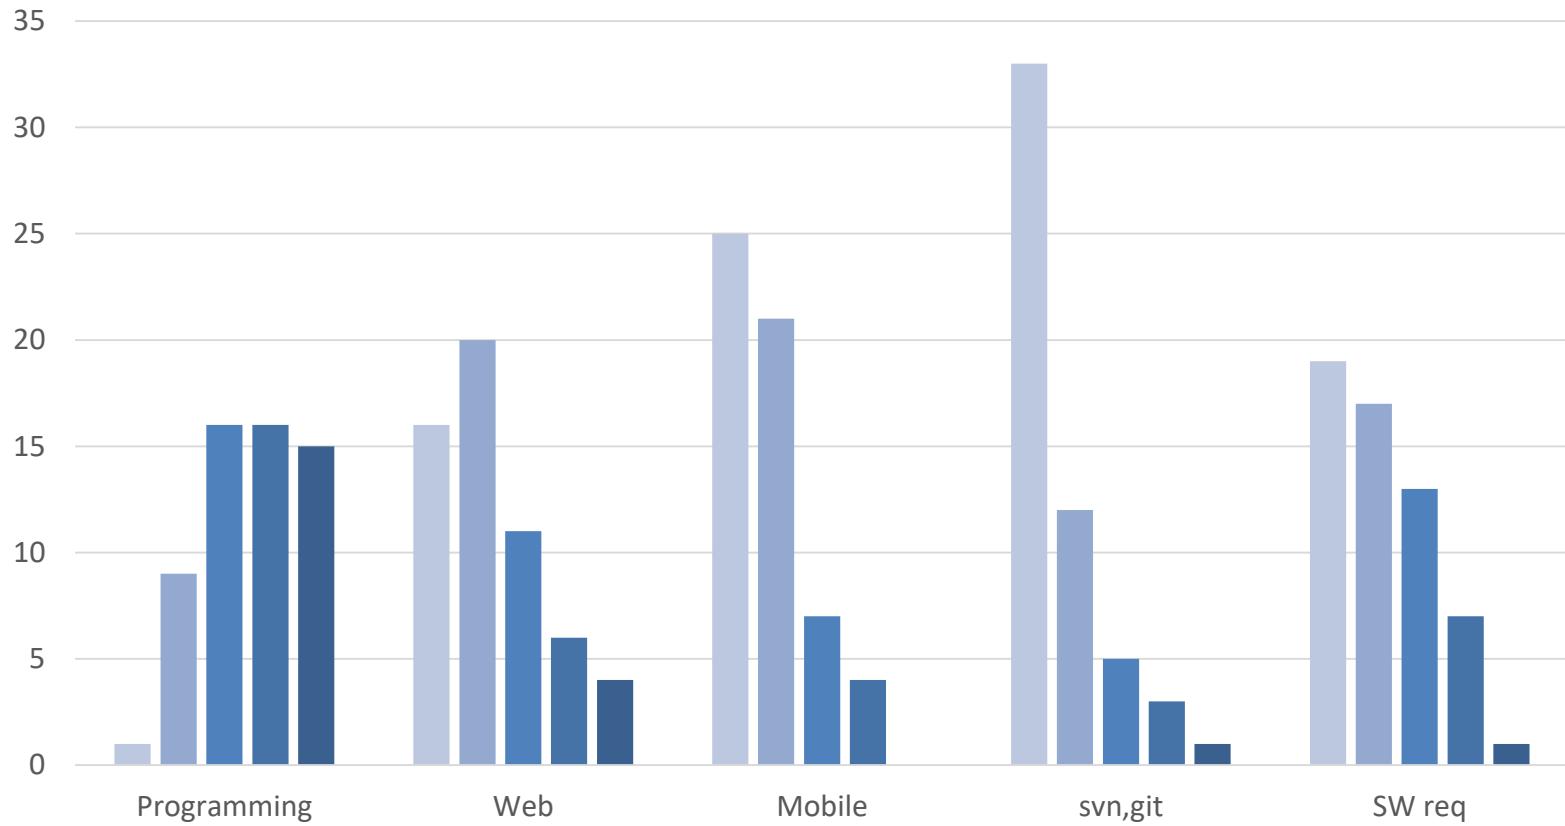

BETA

- Non-uniform distribution of hours
- Decreasing impact of classes
- Moving from Classes to Exercises (in class, in lab)
- Increasing time for supervised GW

Students (about you...)

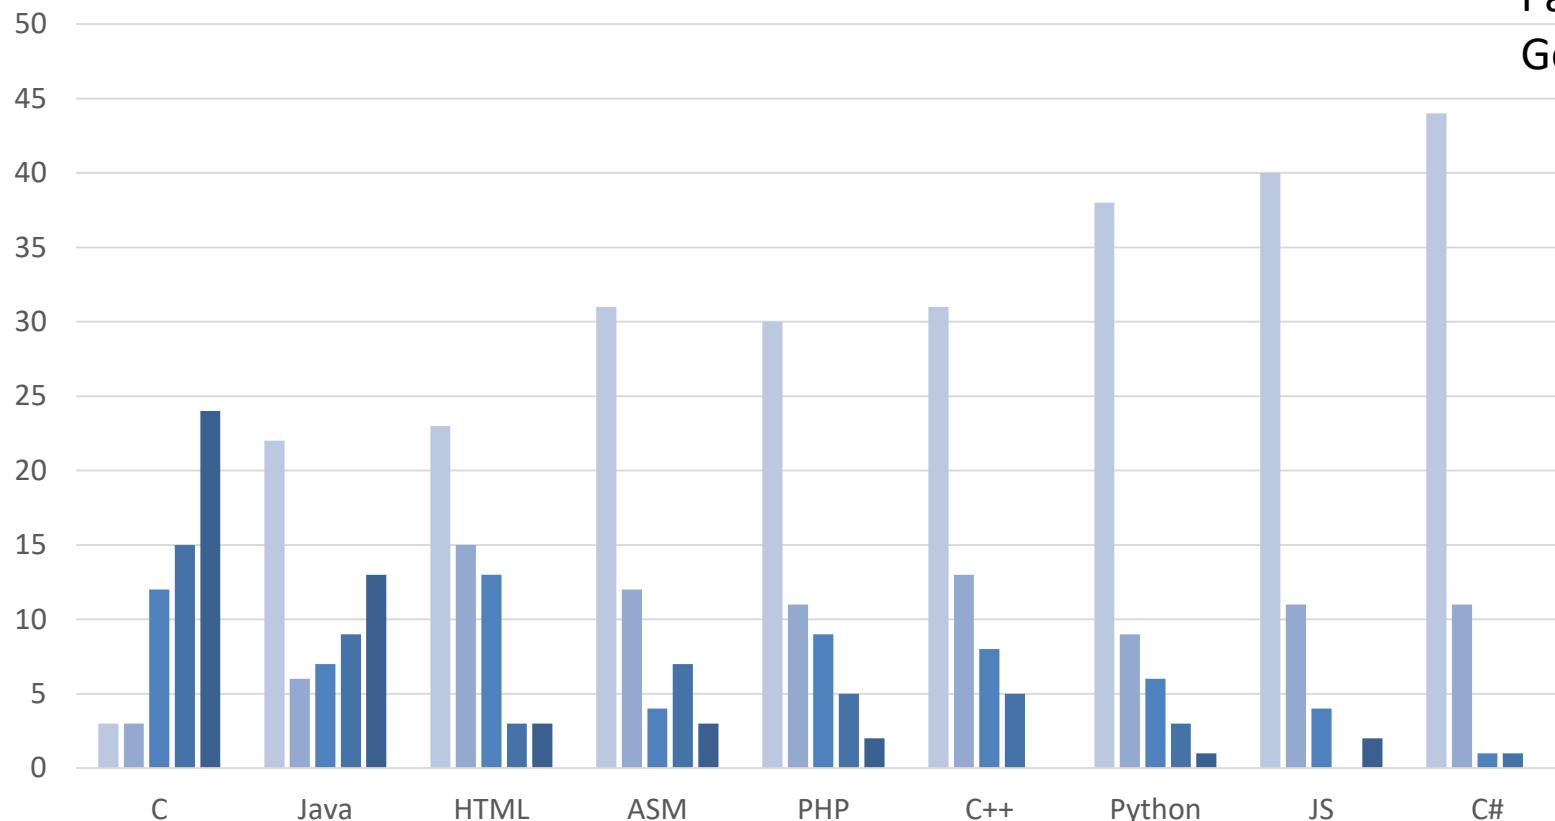

Skills

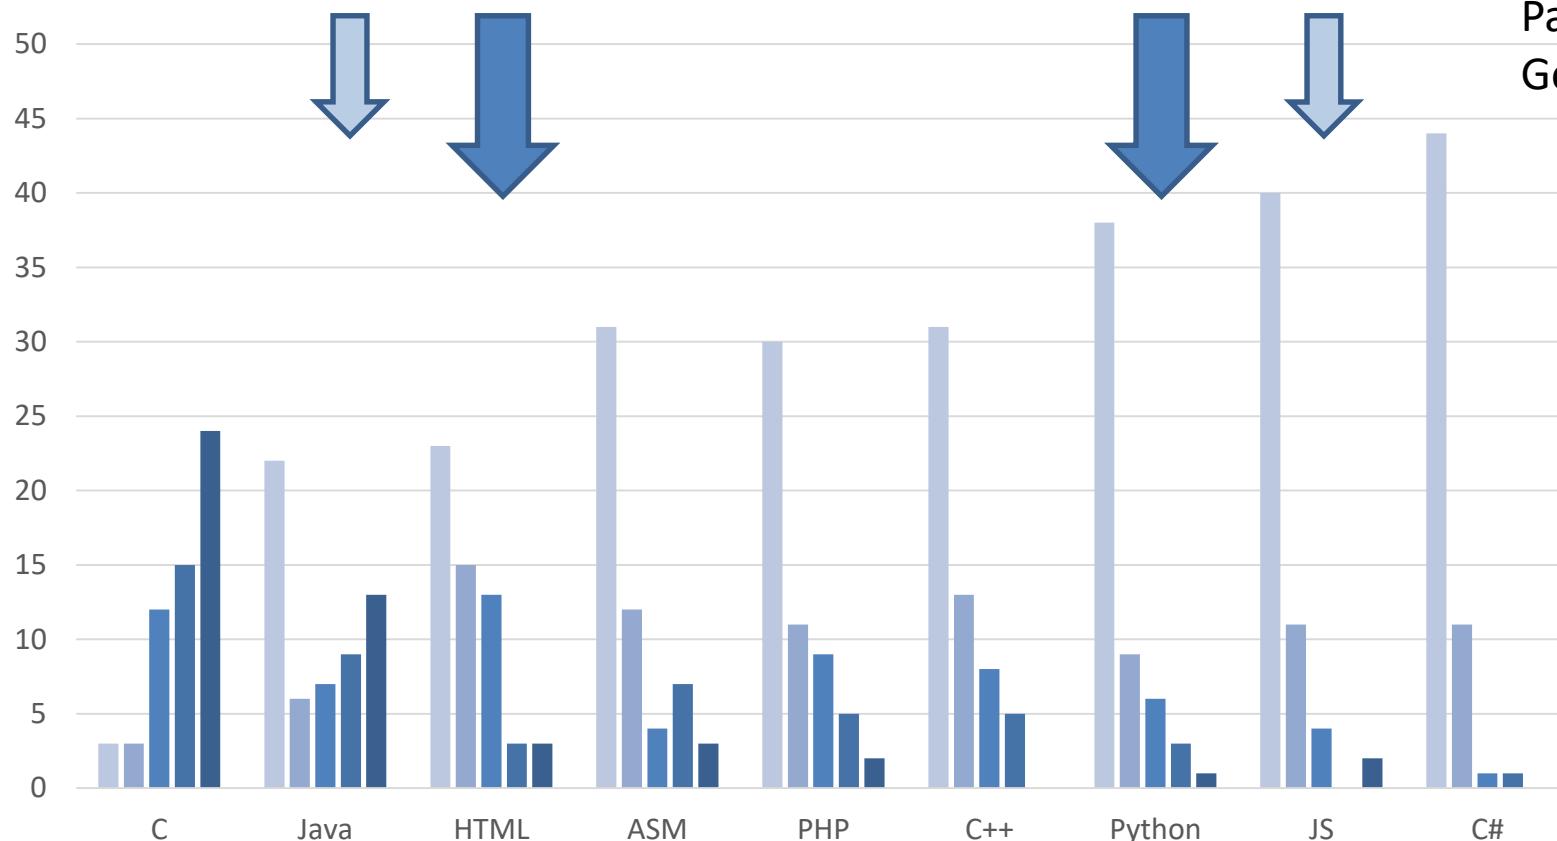

Languages

Others:
SQL, Bash,
Matlab, Awk,
Kotlin, VB,
Pascal, Ruby,
Go, Perl

Languages

Others:
SQL, Bash,
Matlab, Awk,
Kotlin, VB,

Don't worry... we'll get there

From initial survey

Topic	Low (1-2)	Average (3)	High (4-5)	Projects
Programming (in general)	13.21%	41.51%	35.85%	14/14
Web Architectures	58.49%	16.98%	15.09%	13/14
Mobile development	83.02%	3.77%	3.77%	8/14
Source Control management	86.79%	1.89%	1.89%	14/14
Software requirements specification	75.47%	11.32%	3.77%	14/14
Python	86.79%	0.00%	3.77%	14/14
HTML/CSS	67.92%	13.21%	9.43%	14/14
JavaScript	81.13%	5.66%	3.77%	12/14
Java	73.58%	11.32%	5.66%	8/14
C	13.21%	18.87%	58.49%	3/14

At exam-time

Course Introduction

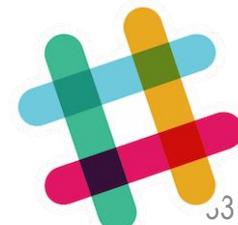

RESOURCES

Course website

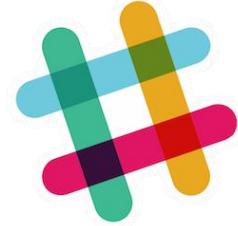

- <http://bit.ly/polito-ami>
- All lecture slides
- All exercise material (texts, solutions, examples, ...)
- Reference papers, links, ...
- Exams
- News and notices (official)
- Detailed (tentative) schedule
- Lecture video recordings

Additional on-line resources

- **Facebook** group, for open discussion and information exchange: <https://www.facebook.com/groups/polito.ami/>
- Video Lectures on **YouTube**
<https://www.youtube.com/playlist?list=PLqRTLlwsxDL8fUcY2Y54sITILyJcTySpC>
- Collaboration on **Google Drive**
- Projects on **GitHub**:
<https://github.com/Aml-2018>
- Communication with teachers and among groups via **Slack App** at polito-ami-2018.slack.com

Internal Communication

- All contacts with teachers **must** take place on Slack
 - E-mail messages will not be considered
- The **#general** channel is reserved to official communications by the teachers.
- The **#discussion** channel is for questions, requests, ideas, etc. by any student. Teachers will read and respond.
- The **#random** channel is for free discussion among students.
- Groups of students may create *private channels* for collaborating on their project

Development

- All development (labs, projects, websites) on GitHub
 - Use it! Really! Continuously!
- Create a GitHub account
 - Choose a nickname that may last forever (don't use the "matricola" number)
 - Register with a @studenti.polito.it address, you may get free private repositories (request on education.github.com)
- Per-project repositories will be created in Aml-2018
 - If you need further repositories, please ask
- Always commit your intermediate work
- Will give a “reading” with git/github tutorial

Study material

- No suitable textbook for the whole course
- Teachers' slides
- Lecture videos
- Suggested books for some of the topics
- Suggested papers
- On-line technical documents

Course Introduction

EXAM

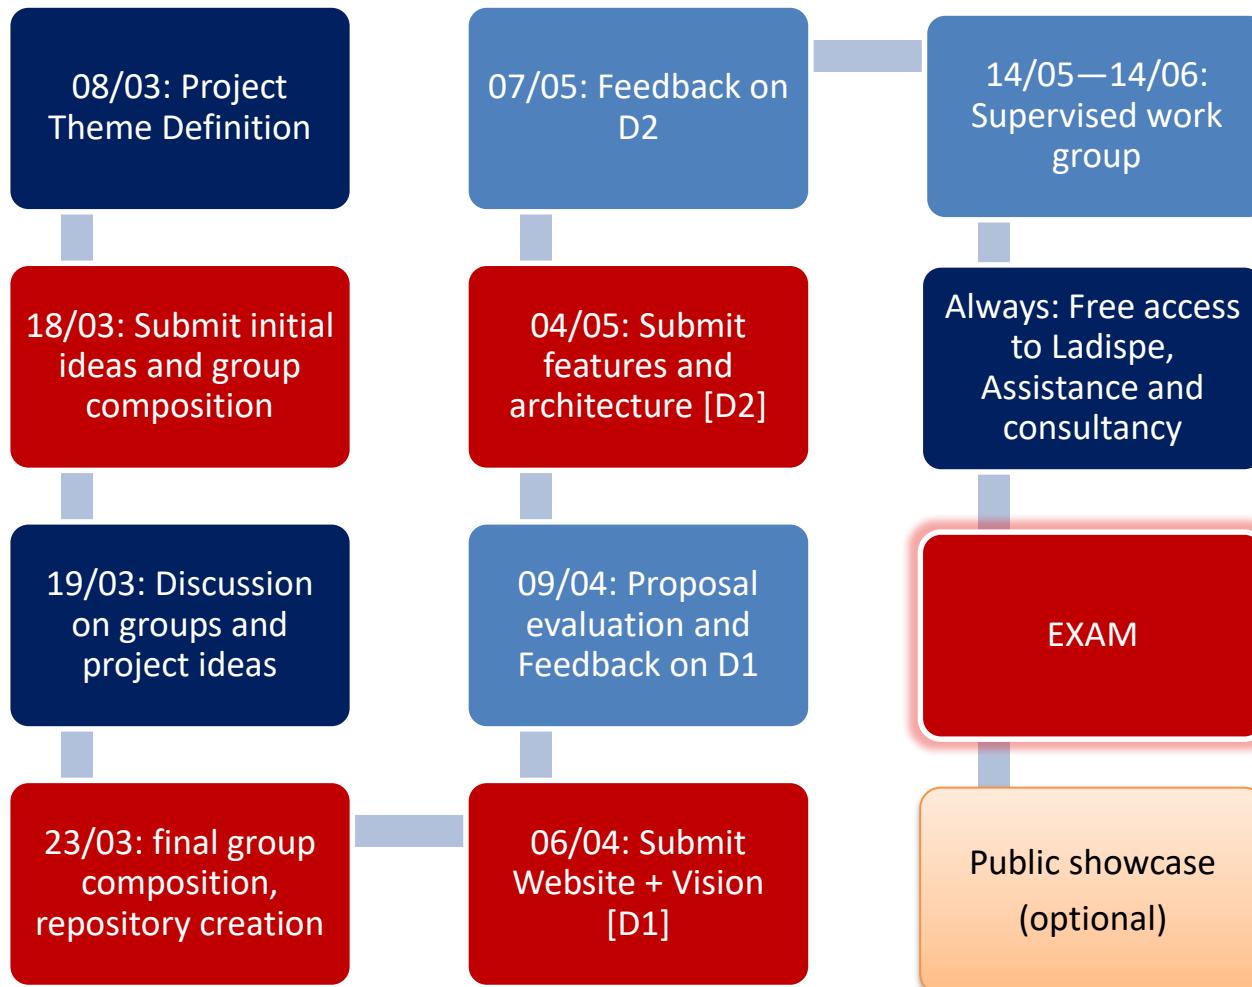

Goal and rationale

- The exam should assess the capability to design and develop some Aml functionality
- Multiple skills and disciplines are needed in the process
- The course is highly lab-intensive
- A sound design process must be coupled with the capacity to deliver a working system
- You are close to graduation
- Some of you need to return to their home universities

Exam rules

- The **exam** consists in **the evaluation of the Group Work** that is assigned during the course
 - Documents uploaded on-line
 - Presentation given at the exam date
- Work groups must be formed at the beginning of the course
- Topics are proposed by the group and approved by the teachers
- Many lab hours are devoted to group work development
 - LADISPE may be used in additional hours
- Ideally, developed **during** the course

Work Group Development Process

The exam (or, how to get 30+)

- Evaluation of documents (submitted in advance)
 - Project web site
 - Deliverable D1 (vision)
 - Deliverable D2 (features and architecture)
 - Presentation video
 - Project sources on GitHub
- Oral exam
 - Presentation + Demo (20 minutes)
 - Discussion (5 minutes)
- Individual contribution must emerge from the presentation

First steps

- Identify a Working Group (WG)
 - 3 or 4 students
 - Possibly, with mixed skills
 - Avoid all-non-programmers groups
- Start developing ideas
 - The first two weeks' classes will give you suggestions, seeds, pointers, ...
 - Interact with the teachers

Tips and suggestions

- Start sooner than later
 - Really
- Don't aim too high
 - Modular features
- Seek interaction
 - Ask for feedback and suggestion
 - ...and listen to them
- Exploit the LAB hours
 - Proposed labs, Supervised WG, Free hours, ...

Course Introduction

PROJECT EXAMPLES

Past projects

Year	Theme	URL
2015	Smart “Cittadella Politecnica” (smart university campus)	https://ami-2015.github.io/
2016	Health and Well-Being	https://ami-2016.github.io/
2017	Sustainability	https://ami-2017.github.io/

2017 showcase

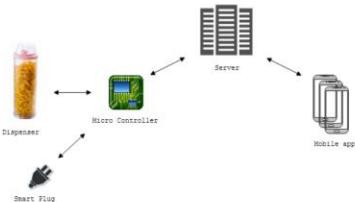

AmIcook

Whenever you are hungry, with AmIcook you can easily organize a meal or join one. It will count how many participants will attend the meal, furthermore it will decide and dispense the optimal amount of ingredients needed for the pasta.

Then, it controls the stove and notifies the users when the meal is ready.

Implemented with:
Arduino Uno, sensors, a stepper motor, a smart plug, a server and an Android App

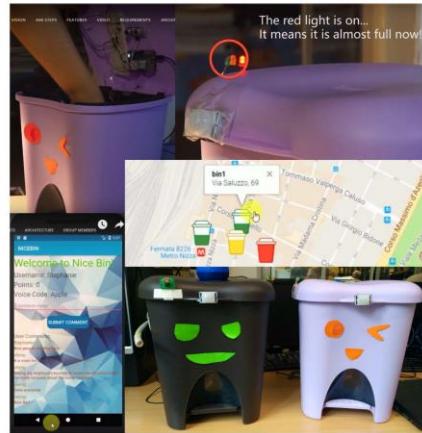

Cook automatically pasta, shared meals, save food, save time

Samuele Battaglino
Davide Cota
Roberto Monelli
Arian Nowbahari

NICE Bins

Waste production is constantly increasing in urban areas, leading to waste abandon and untidy neighborhoods. NICE Bins makes the habit of waste classification easier and fun for residents and allows faster notification of waste abandon.

Arduino, Raspberry Pi, Alexa API

waste, classification, speaking bins

2017 showcase

The Battery Drive-in

Price limitations? Limited life? Long charging process?

Why not switching ElectricVehicles batteries up?

Adopted technologies

- Arduino
- Raspberry Pi
- Li-ion battery
- Python

Paolo Notaro
Matteo Manfredi
Simone Longobardi

ElectricVehicles - Sustainability - Ambient Intelligence - Batteries

POLITECNICO DI TORINO
Dipartimento di Automatica e Informatica

Ambient Intelligence Student Showcase 2017 <http://bit.ly/polito-ami>

Treatabit powered by I3P

Trash-IT

Trash-IT is an intelligent waste collection system that reduces human workload and increases efficiency within an eating environment. Through sensors, it locates tables that need to be cleaned, offering the option of sending a bin directly to them.

Adopted technologies

- OpenCV
- ROS
- Android
- Arduino
- Raspberry Pi

Sirio Longo
Marybeth Iannuzzi
Pietro Rastelli
Victoria Florence

Keywords: Sustainability, Recycling, Waste Disposal, Computer Vision, ROS

<https://ami-2017.github.io/Trash-IT/>

Dipartimento di Automatica e Informatica

Ambient Intelligence Student Showcase 2017 <http://bit.ly/polito-ami>

Treatabit powered by I3P

2016 winners

Safety Mama

SafetyMama helps women to attain a peaceful pregnancy. It collects and monitors data pertaining to their physical well-being and tries to make them feel unstressed. She receives notification about her stress status and daily activity through a mobile application. If she is stressed, and at home, the Home Relaxation System starts automatically.

Adopted technologies

- Raspberry Pi+Raspberry Z-Wave
- Philips Hue Lamp
- Android Application

Keywords: Stress Detection, Automatic presence recognition, Daily steps' control

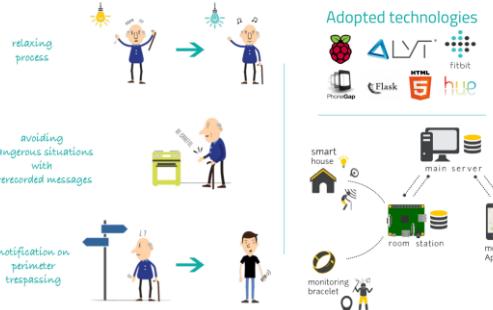

<http://ami-2016.github.io/SMa/>

Lorenzo Meli
Maurizio Pinna
Gianna Pistillo
Marco Viadana

Giovanni C. Monna
Stefano Codazzo
Itzel Barreto

EMERGENCY QUEST

Description
The goal of the EQ is to give support to people with a disease like dementia or Alzheimer, making them able to continue living at home by themselves

Adopted technologies

- PhoneGap
- Flask
- HTML5
- hub
- fitbit

Keywords: room station • bracelet • caregiver • map • notifications • agitation detection • mobile application

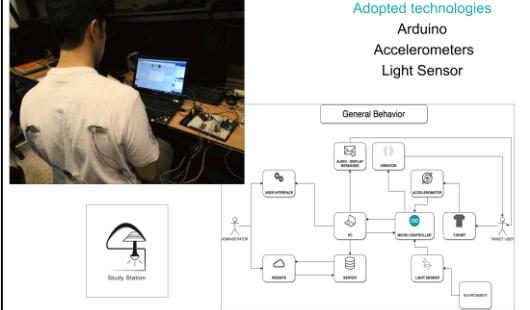

<https://ami-2016.github.io/EQ/>

POLITECNICO DI TORINO
Dipartimento di Automatica e Informatica

Ambient Intelligence Student Showcase 2016
<http://bit.ly/polito-ami>

Study Station

Study Station is a system thought as a *wearable device* that avoids health issues caused by wrong postures maintained over time. Benefits interest all users that want to keep the body relaxed even after long periods of sitting.

Adopted technologies

- Arduino
- Accelerometers
- Light Sensor

Keywords: Study Station Project, wearable technology, wearable device, Health and Well-Being, Biomedical

<http://ami-2016.github.io/StSt/>

POLITECNICO DI TORINO
Dipartimento di Automatica e Informatica

Ambient Intelligence Student Showcase 2016
<http://bit.ly/polito-ami>

2015 winners

Student Showcase MARCOPOLI

Description
Giving everyone the opportunity to enhance their own campus experience is our mission. With MarcoPoli, students receive smart suggestions about the best places where to go. Moreover, stakeholders can monitor and gather statistics about the whole structure, or they can get sponsored on the platform. Avoid stress, avoid chaos: embrace MarcoPoli!

Adopted technologies
HTML5 + jQuery + CSS3 + JavaScript
RaspberryPi

Keywords: crowd detection • temperature • noise • maps • smart • responsive • place finder • expandable• adaptable

<http://ami-2015.github.io/MarcoPoli>

Ambient Intelligence: technology and design 2015 edition
<http://bit.ly/polito-ami>

Student Showcase Well Cleaned

Description
W.C. is a mobile application that allows users to check on the Politecnico map where all the bathrooms are located and to see their condition in terms of toilet paper, trash and soap.

Adopted technologies
Proximity sensors
Raspberry Pi 2
Phonegap
Google Maps APIs

Keywords: campus map, real time information, bathroom, student, cleaning staff member, notification, schedule

<http://ami-2015.github.io/well-cleaned>

Ambient Intelligence: technology and design 2015 edition
<http://bit.ly/polito-ami>

Student Showcase MyBikePlace

Description
MyBikePlace is a bike-parking managing system able to communicate with users through a dedicated mobile app. It suggests comfortable places for your bikes and protects them.

Adopted technologies
Raspberry
Android OS
MySQL
Pressure sensors
GPS localization
NFC detection

Keywords: efficient environment, safer bike-parking, tool-free

<http://ami-2015.github.io/MyBP>

Ambient Intelligence: technology and design 2015 edition
